

Fuel consumption and CO₂ emission of passenger cars	
Marke Model Version Fuel Getriebe NOx emission (g/km)	MG MG4 64 kWh Luxury Range 450 KM WLTP Electric Automatik 0
Fuel consumption measured according to official test cycle CO₂ emission measured according to official test cycle CO ₂ is the greenhouse gas that plays the most important role in global climate change.	0 l/100km 0 g/km
CO₂ emission compared to the average of all models (with the average being 139g/km CO ₂)	
The diagram shows a horizontal scale of CO₂ emissions in g/km. It starts with a blue box labeled '0' with a black triangle pointing to it. This is followed by seven colored boxes labeled A through G, each with a numerical value above it: A (dark green, 1), B (green, 90), C (light green, 120), D (yellow, 150), E (orange, 180), F (red-orange, 210), and G (red, 240). The units 'g/km CO₂' are written at the end of the scale.	
Year of application Test procedure	2019 WLTP
A guide to fuel consumption and CO ₂ emission with data for all models of new passenger cars is available on the website "energieverrekeners", www.schoneauto.be . In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO ₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO ₂ emission. See the Royal Decree of 5 September 2001.
