

Fuel consumption and CO ₂ emission of passenger cars	
Marke Model Version Fuel Getriebe NOx emission (g/km)	Hyundai Tucson 1.6 T-GDi 160 Feel + GPS + CAM + ALU18 Benzin Schaltgetriebe 13.1
Fuel consumption measured according to official test cycle CO₂ emission measured according to official test cycle CO₂ is the greenhouse gas that plays the most important role in global climate change.	6.9 l/100km 156 g/km
CO₂ emission compared to the average of all models (with the average being 139g/km CO₂) The chart displays CO₂ emission levels in g/km. The scale ranges from 0 to 240 g/km with major ticks every 30 units. The corresponding categories are labeled A through G. A black triangle indicates the car's position at 139 g/km, which falls between category C (120 g/km) and category D (150 g/km).	
Year of application Test procedure	2019 WLTP
A guide to fuel consumption and CO₂ emission with data for all models of new passenger cars is available on the website "energieverrekeners", www.schoneauto.be. In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO₂ emission. See the Royal Decree of 5 September 2001.
