

Fuel consumption and CO ₂ emission of passenger cars	
Marke Model Version Fuel Getriebe NOx emission (g/km)	MG ZS 1.5i 115 Comfort + Leather + GPS + 360Cam + Heated Seats + LED Benzin Schaltgetriebe 22.1
Fuel consumption measured according to official test cycle CO₂ emission measured according to official test cycle CO ₂ is the greenhouse gas that plays the most important role in global climate change.	6.5 l/100km 145 g/km
CO₂ emission compared to the average of all models (with the average being 139g/km CO ₂)	
 The diagram shows a horizontal scale of CO₂ emissions in g/km. The scale starts at 0 and goes up to 240 in increments of 30. Above the scale, the values 1, 90, 120, 150, 180, 210, and 240 are marked. Below the scale, the categories A, B, C, D, E, F, and G are marked. A black triangle points to the value 139, which is between category C (120) and D (150).	
Year of application Test procedure	2019 WLTP
A guide to fuel consumption and CO₂ emission with data for all models of new passenger cars is available on the website "energieverrekeners", www.schoneauto.be. In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO₂ emission. See the Royal Decree of 5 September 2001.
