

Fuel consumption and CO ₂ emission of passenger cars	
Marke Model Version Fuel Getriebe NOx emission (g/km)	Volkswagen Taigo 1.0TSI 115 R-Line + IQ Light + Alu18 + Keyless +Cam Benzin Schaltgetriebe 21.3
Fuel consumption measured according to official test cycle 5.5 l/100km CO₂ emission measured according to official test cycle CO₂ is the greenhouse gas that plays the most important role in global climate change. 126 g/km	
CO₂ emission compared to the average of all models (with the average being 139g/km CO₂) The chart displays CO₂ emission levels in g/km. The scale ranges from 0 to 240 g/km with major ticks every 30 units. The background is divided into colored segments: dark blue (0-90), green (90-120), light green (120-150), yellow-green (150-180), yellow (180-210), orange (210-240), and red (240+). A black triangle points upwards at the 139 g/km mark, which falls within the light green segment (between 120 and 150).	
Year of application Test procedure	2019 WLTP
A guide to fuel consumption and CO₂ emission with data for all models of new passenger cars is available on the website "energieverrekeners", www.schoneauto.be. In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO₂ emission. See the Royal Decree of 5 September 2001.
