

Fuel consumption and CO ₂ emission of passenger cars	
Marke Model Version Fuel Getriebe NOx emission (g/km)	MG ZS 1.5i 115 Comfort + Leather + GPS + 360Cam + Heated Seats + LED Benzin Schaltgetriebe 22.1
Fuel consumption measured according to official test cycle CO₂ emission measured according to official test cycle CO ₂ is the greenhouse gas that plays the most important role in global climate change.	6.5 l/100km 145 g/km
CO₂ emission compared to the average of all models (with the average being 139g/km CO ₂)	
 The diagram shows a horizontal scale of CO₂ emissions in g/km. The scale starts at 0 and goes up to 240 in increments of 30. Above the scale, the values 1, 90, 120, 150, 180, 210, and 240 are marked. Below the scale, the categories A through G are marked. A black triangle points to the value 139, which is between category C (120) and D (150).	
Year of application Test procedure	2019 WLTP
A guide to fuel consumption and CO₂ emission with data for all models of new passenger cars is available on the website "energieverrekeners", www.schoneauto.be. In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO₂ emission. See the Royal Decree of 5 September 2001.
