

Fuel consumption and CO ₂ emission of passenger cars	
Marke Model Version Fuel Getriebe NOx emission (g/km)	Nissan Qashqai 158 MHEV 4WD AUT N-Design Comfort Pack GPS LED Benzin Automatik 0
Fuel consumption measured according to official test cycle CO₂ emission measured according to official test cycle CO ₂ is the greenhouse gas that plays the most important role in global climate change.	0 l/100km 0 g/km
CO₂ emission compared to the average of all models (with the average being 139g/km CO ₂)	
<p>The diagram shows a horizontal scale of CO₂ emissions in g/km. The scale starts at 0 and increases in increments of 30 up to 240. Above the scale, the values 1, 90, 120, 150, 180, 210, and 240 are marked. Below the scale, the categories A through G are labeled. Category 0 is a dark blue box with a black triangle pointing to it. Category A is dark green, B is green, C is light green, D is yellow, E is orange, F is red, and G is dark red.</p>	
Year of application Test procedure	2019 WLTP
<p>A guide to fuel consumption and CO₂ emission with data for all models of new passenger cars is available on the website "energieverters", www.schoneauto.be. In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO₂ emission. See the Royal Decree of 5 September 2001.</p>
