

Fuel consumption and CO ₂ emission of passenger cars	
Marke Model Version Fuel Getriebe NOx emission (g/km)	Geely Starray EM-i PHEV 262 Pro Plus+ 136 KMEV Leather Heated Seats ACC ALU19 Plug-in-Hybrid-Benziner Automatik 4.6
Fuel consumption measured according to official test cycle CO₂ emission measured according to official test cycle CO ₂ is the greenhouse gas that plays the most important role in global climate change.	2.4 l/100km 54 g/km
CO₂ emission compared to the average of all models (with the average being 139g/km CO ₂)  The diagram shows a horizontal scale for CO₂ emissions in g/km. It starts at 0 (dark blue box) and goes up to 240 (red box). The scale is divided into categories: 0 (dark blue), 1-90 (dark green, labeled A), 90-120 (green, labeled B), 120-150 (light green, labeled C), 150-180 (yellow, labeled D), 180-210 (orange, labeled E), 210-240 (red, labeled F), and 240 (red, labeled G). A black triangle points to the 139 g/km mark, which is located between the green (B) and light green (C) sections.	
Year of application Test procedure	2019 WLTP
A guide to fuel consumption and CO ₂ emission with data for all models of new passenger cars is available on the website "energieverrekeners", www.schoneauto.be . In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO ₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO ₂ emission. See the Royal Decree of 5 September 2001.
