

Fuel consumption and CO₂ emission of passenger cars		
Make Model Version Fuel Gearbox NOx emission (g/km)	Skoda Karoq 1.5 TSi 150 DSG Sportline + Virtual + GPS + CAM + LED + ALU19 Petrol Automatic 0	
Fuel consumption measured according to official test cycle CO₂ emission measured according to official test cycle CO ₂ is the greenhouse gas that plays the most important role in global climate change.	0 l/100km 140 g/km	
CO₂ emission compared to the average of all models (with the average being 139g/km CO₂) The scale shows CO₂ emissions in g/km. Categories are: 0 (dark blue), 1-90 (dark green, A), 90-120 (green, B), 120-150 (light green, C), 150-180 (yellow, D), 180-210 (orange, E), 210-240 (red, F), and 240+ (dark red, G). A black triangle points to 139 g/km, which is between category C and D.		
Year of application Test procedure	2019 WLTP	
A guide to fuel consumption and CO₂ emission with data for all models of new passenger cars is available on the website "energieverrekeners", www.schoneauto.be. In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO₂ emission. See the Royal Decree of 5 September 2001.
