

Fuel consumption and CO ₂ emission of passenger cars	
Make Model Version Fuel Gearbox NOx emission (g/km)	Citroën C4 Hybrid 145 e-DCS6 MAX New model + Navi + Alu18 + Drive assist pack Petrol Automatic 16.6
Fuel consumption measured according to official test cycle CO₂ emission measured according to official test cycle CO ₂ is the greenhouse gas that plays the most important role in global climate change.	4.7 l/100km 106 g/km
CO₂ emission compared to the average of all models (with the average being 139g/km CO₂) The chart displays CO₂ emission levels in g/km. The scale ranges from 0 to 240 g/km, with major ticks every 30 units. The bars are color-coded as follows: 0 (dark blue), A (dark green, 1-90), B (green, 90-120), C (light green, 120-150), D (yellow, 150-180), E (orange, 180-210), F (red, 210-240), and G (dark red, 240+). A black triangle points to the B category, indicating the car's emission level.	
Year of application Test procedure	2019 WLTP
A guide to fuel consumption and CO₂ emission with data for all models of new passenger cars is available on the website "energieverrekeners", www.schoneauto.be. In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO₂ emission. See the Royal Decree of 5 September 2001.
