| <b>Fuel consumption</b><br>measured according to official test cycle<br><br><b>CO<sub>2</sub> emission</b><br>measured according to official test cycle<br>CO <sub>2</sub> is the greenhouse gas that plays the most important role in global climate change.                                                                                                                                                                                                                                                                                                                                                   | <b>6.94 l/100km</b><br><br><br><b>156 g/km</b>                                      |
| <b>CO<sub>2</sub> emission compared to the average of all models</b><br>(with the average being 139g/km CO <sub>2</sub> )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                     |
| <p>The diagram shows a horizontal scale for CO<sub>2</sub> emissions in g/km. It starts at 0 (dark blue) and increases in increments of 30 up to 240. The scale is divided into color-coded categories: 0-90 (dark blue), 90-120 (dark green), 120-150 (green), 150-180 (yellow-green), 180-210 (yellow), 210-240 (orange), 240-270 (red), and 270-300 (dark red). The categories are labeled A through G. A black triangle points to the 139 g/km mark, which falls between category D (150-180) and category E (180-210).</p>                                                                                 |                                                                                     |

| A guide to fuel consumption and CO <sub>2</sub> emission with data for all models of new passenger cars is available on the website "energieverrekeners", <a href="http://www.schoneauto.be">www.schoneauto.be</a> . In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO <sub>2</sub> emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO <sub>2</sub> emission. See the Royal Decree of 5 September 2001. |                                                                                     |
