

Fuel consumption and CO ₂ emission of passenger cars	
Make Model Version Fuel Gearbox NOx emission (g/km)	MG ZS 1.5 VTi Luxury + Leather + GPS + 360 Cam + LED Petrol Manual 8
Fuel consumption measured according to official test cycle CO₂ emission measured according to official test cycle CO ₂ is the greenhouse gas that plays the most important role in global climate change.	6.94 l/100km 156 g/km
CO₂ emission compared to the average of all models (with the average being 139g/km CO ₂)	
The diagram shows a horizontal scale for CO₂ emissions in g/km. It starts at 0 (dark blue) and increases in increments of 30 up to 240. The scale is divided into color-coded categories: 0-90 (dark blue), 90-120 (dark green), 120-150 (green), 150-180 (yellow-green), 180-210 (yellow), 210-240 (orange), and 240-270 (red). The categories are labeled A through G. A black triangle points to the 139 g/km mark, which falls between category D (150-180) and category E (180-210).	
Year of application Test procedure	2019 WLTP
A guide to fuel consumption and CO ₂ emission with data for all models of new passenger cars is available on the website "energieverrekeners", www.schoneauto.be . In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO ₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO ₂ emission. See the Royal Decree of 5 September 2001.
