

Fuel consumption and CO ₂ emission of passenger cars	
Make Model Version Fuel Gearbox NOx emission (g/km)	Renault Austral E-TECH 200 Full Hybrid Techno + Safety + Winter Pack Hybrid Petrol Automatic 49.5
Fuel consumption measured according to official test cycle CO₂ emission measured according to official test cycle CO ₂ is the greenhouse gas that plays the most important role in global climate change.	4.6 l/100km 104 g/km
CO₂ emission compared to the average of all models (with the average being 139g/km CO ₂)	
The scale shows CO₂ emissions in g/km. Categories are: 0 (dark blue), 90 (dark green, A), 120 (green, B), 150 (light green, C), 180 (yellow, D), 210 (orange, E), 240 (red, F), and 240 (dark red, G). A black triangle points to the average value of 139 g/km, which is located between the 120 g/km (B) and 150 g/km (C) markers.	
Year of application Test procedure	2019 WLTP
A guide to fuel consumption and CO₂ emission with data for all models of new passenger cars is available on the website "energieverrekeners", www.schoneauto.be. In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO₂ emission. See the Royal Decree of 5 September 2001.
