

Fuel consumption and CO₂ emission of passenger cars		
Make Model Version Fuel Gearbox NOx emission (g/km)	Renault Captur 1.0 TCe 90 Evolution + GPS RLink + Camera + Comfort Pack Petrol Manual 46.7	
Fuel consumption measured according to official test cycle CO₂ emission measured according to official test cycle CO ₂ is the greenhouse gas that plays the most important role in global climate change.	6.1 l/100km 137 g/km	
CO₂ emission compared to the average of all models (with the average being 139g/km CO₂) The chart displays a scale from 0 to 240 g/km CO₂ in increments of 30. The categories are: 0 (dark blue), 1 (dark green), 90 (green), 120 (light green), 150 (yellow-green), 180 (yellow), 210 (orange), 240 (red), and G (dark red). A black triangle points to the 139 g/km mark, which is located between the 120 g/km (class C) and 150 g/km (class D) boundaries.		
Year of application Test procedure	2019 WLTP	
A guide to fuel consumption and CO₂ emission with data for all models of new passenger cars is available on the website "energieverrekeners", www.schoneauto.be. In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO₂ emission. See the Royal Decree of 5 September 2001.
