

Fuel consumption and CO ₂ emission of passenger cars	
Make Model Version Fuel Gearbox NOx emission (g/km)	Nissan Qashqai 1.3 DIG-T 140 Acenta + Carplay + Cold Pack Petrol Manual 16.7
Fuel consumption measured according to official test cycle CO₂ emission measured according to official test cycle CO₂ is the greenhouse gas that plays the most important role in global climate change.	6.3 l/100km 143 g/km
CO₂ emission compared to the average of all models (with the average being 139g/km CO₂) The chart displays CO₂ emission levels in g/km. The scale ranges from 0 to 240 g/km with major ticks every 30 units. The corresponding labels below the scale are 0, A, B, C, D, E, F, G. An arrow points to the value 139, which falls between categories B and C.	
Year of application Test procedure	2019 WLTP
A guide to fuel consumption and CO₂ emission with data for all models of new passenger cars is available on the website "energieverrekeners", www.schoneauto.be. In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO₂ emission. See the Royal Decree of 5 September 2001.
