

Fuel consumption and CO ₂ emission of passenger cars	
Make Model Version Fuel Gearbox NOx emission (g/km)	Citroën C4 Hybrid 145 e-DCS6 MAX New model + Navi + Alu18 + Drive assist pack Petrol Automatic 16.6
Fuel consumption measured according to official test cycle CO₂ emission measured according to official test cycle CO ₂ is the greenhouse gas that plays the most important role in global climate change.	4.7 l/100km 106 g/km
CO₂ emission compared to the average of all models (with the average being 139g/km CO₂)  The scale shows CO₂ emissions in g/km. Categories are: 0 (dark blue), 1 (dark green, A), 90 (green, B), 120 (light green, C), 150 (yellow, D), 180 (orange, E), 210 (red, F), 240 (dark red, G). A black triangle points to the average value of 139 g/km, which is located between the 120 g/km (B) and 150 g/km (C) marks.	
Year of application Test procedure	2019 WLTP
A guide to fuel consumption and CO₂ emission with data for all models of new passenger cars is available on the website "energieverrekeners", www.schoneauto.be. In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO₂ emission. See the Royal Decree of 5 September 2001.
