

Fuel consumption and CO ₂ emission of passenger cars	
Make Model Version Fuel Gearbox NOx emission (g/km)	Peugeot 3008 145 e-DSC6 HYBRID Allure + GPS + LED + ALU19 Breda Petrol Automatic 28.2
Fuel consumption measured according to official test cycle CO₂ emission measured according to official test cycle CO ₂ is the greenhouse gas that plays the most important role in global climate change.	5.3 l/100km 121 g/km
CO₂ emission compared to the average of all models (with the average being 139g/km CO₂) The chart displays CO₂ emission levels in g/km. The scale ranges from 0 to 240 g/km with major ticks every 30 units. The background is divided into colored segments: dark blue (0-90), green (90-120), light green (120-150), yellow (150-180), orange (180-210), red (210-240), and dark red (above 240). A black triangle points upwards at the 139 g/km mark, which falls within the light green segment.	
Year of application Test procedure	2019 WLTP
A guide to fuel consumption and CO₂ emission with data for all models of new passenger cars is available on the website "energieverrekeners", www.schoneauto.be. In addition to the fuel efficiency of a car, driving behaviour and other non-technical factors also determine the fuel consumption and CO₂ emission of a car. Regular and good maintenance of the car in accordance with the manufacturer's instructions also promotes a reduction in fuel consumption and CO₂ emission. See the Royal Decree of 5 September 2001.
